

## CLAIM AMENDMENTS

1-6. (canceled)

1           7. (currently amended) An apparatus for shrinking a  
2 foil wrapped about a stack of objects and projecting vertically  
3 past an end of the stack, the apparatus comprising:

4           a frame extending vertically adjacent the stack;  
5           means including a heater vertically displaceable on the  
6 frame and directed inwardly at the wrapped stack for shrinking the  
7 foil thereabout;

8           a nozzle centered vertically on the stack and having an  
9 annular array of outlets directed generally vertically and out-  
10 wardly at the end of the stack; and

11          means for supplying a gas under pressure to the nozzle  
12 for directing respective jets of the gas from the openings at the  
13 foil extending past the end for erecting the foil extending past  
14 the end.

1           8. (currently amended) The foil-shrinking apparatus  
2 defined in claim 7 wherein the nozzle has an annular face extending  
3 at an acute angle to the end face and formed with the outlets.

1           9. (Previously presented) The foil-shrinking apparatus  
2       defined in claim 7 8 wherein the face and outlets extend at an  
3       angle of about 45° to a vertical centerline of the stack.

1           10. (Previously presented) The foil-shrinking apparatus  
2       defined in claim 7, further comprising  
3           means for vertically moving the nozzle toward and away  
4       from the stack.

1           11. (currently amended) The foil-shrinking apparatus  
2       defined in claim 7 wherein the end is the upper end and the stack  
3       has a lower end past which the foil also extends, the apparatus  
4       further comprising:

5           a second such nozzle connected to the gas-supply means  
6       and directed at the lower end for erecting the foil extending  
7       therepast.

1           12. (previously presented) The foil-shrinking apparatus  
2       defined in claim 7, further comprising:  
3           means for pressing the foil against the stack as the foil  
4       is shrunk around the stack.

BEST AVAILABLE COPY

1               13. (previously presented) The foil-shrinking apparatus  
2       defined in claim 12, further comprising  
3               means including a lift table for raising the pressing  
4       means.   --.
